WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two 60 mm lengths of 30 x 30 x 3 angle; square and deburr the ends.
Plate leg (goes flat on the bracket plate): two 6.6 mm holes, 12 mm in from its free edge, 12 and 48 mm up from the bottom end.
Arm leg (lies along the arm's side): two 6.6 mm holes, 15 mm out from the face that sits on the plate, 20 and 40 mm up from the bottom end.
Left and right cleats are mirror images: drill them clamped as a pair.
Fit: plate legs flat on the plate front, 345 to 405 mm up it, arm legs 40 mm apart; two M6 bolts each through the plate (nuts behind); the arm slides between the arm legs and two M6 bolts with crush sleeves pass through cleat, arm and cleat.
Check: both cleats square to the plate, arm legs parallel, 40 mm apart.
