WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 382 mm of 25 x 25 x 1.6 tube; cut both ends square, deburr.
Drill a 6.6 mm hole across through both walls 12 mm from each end:
the two holes are 357.8 mm apart. Drill with the tube flat in a vice.
Fit a 6 mm aluminium crush sleeve (21.8 mm long) at each hole.
Fit: the brace runs at 45 degrees from the clip on the bracket plate
up to the clip under the arm (253 mm up and 253 mm out),
on one M6 pin at each end. It holds the arm level and takes the
load of anything hanging on the head.
Check: hole centres within 0.5 mm; with the arm level, both pins
slide in by hand.
