WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 140 x 70 mm from 3 mm sheet; round the corners, deburr.
Two 6.6 mm holes on the long centre line, 55 mm each side of the middle (they line up with the head plate holes in the arm).
Four 4.5 mm holes, countersunk on the top face, 18 mm each side of the middle along the plate and 27 mm each side across it.
Check the radar housing's lid bosses before drilling and move these four holes to suit the housing you buy.
Fit: under the arm, long side along it, centred on the head axis; two M6 bolts up through plate and arm, crush sleeves, nuts on top.
The housing hangs below on four M4 countersunk screws.
Check: plate flat; the housing sits square under it.
