WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 20.2 mm of 12 mm aluminium tube (8.5 mm bore, or drill the bore out to 8.5 mm). Face both ends square.
It fills the gap between the back of the bracket plate and the pole at the through-bolt, so tightening the bolt does not bend the plate.
File the pole end to a shallow curve if it rocks on the pole.
Fit: on the M8 through-bolt between the plate and the pole.
Check: length 20.2 mm, within 0.5 mm; on a 60 mm pole the plate stays flat when the bolt is tight.
