WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a blank 300 x 162 mm from 2 mm galvanized sheet.
Fold to a U: back 40 mm wide outside, two sides 65 mm deep.
Fold in a sheet folder or over a hardwood block in the vice.
Cut a 20 x 20 mm notch at the foot of the side that faces the road,
against the back: the cable comes out of the sidewalk cover here.
File every edge smooth; paint the cut edges with zinc paint.
Fit: open side against the pole, the free edges of both sides bearing
on the pole; it stands on the sidewalk beside the pole, 300 mm tall.
The two marker band clamps go round it and hold it (pin-Torx security screws).
Check: the free edges touch the pole along their whole length.
